Reference Report

Amadeo S motorised proves
its value in everyday clinical practice at
Orthopädie Reutershagen

Modern digital X-ray diagnostics for an efficient workflow

Orthopädie Reutershagen in Rostock has been using the Amadeo S motorised digital swivel-arm system from OR Technology since October 2024. Following a recommendation from another orthopaedic practice, the team made a conscious decision to chose this system.

"The workflow is very smooth, and the image quality continues to impress us every day. The images are available immediately and can be processed straight away," says Christine, a nurse at the practice.

Faster workflow saves time

Approximately eight to ten patients are X-rayed at the practice every day.

The team particularly appreciates:

- rapid readiness for exposure
- fast response times
- simple operation
- convenient positioning
- immediate image availability

The generator settings can also be adjusted quickly, enabling examinations to be carried out efficiently.

Further information is available under

High image quality

The practice particularly highlights the consistently high image quality.

"The images appear to have greater contrast than those produced by our previous system. Overall, we are very satisfied with the results," emphasises Christine, a nurse at the practice.

Flexible positioning for a wide range of examinations

One of the major advantages of the Amadeo S motorised is the system's flexibility. The rotating X-ray tube, the swivel arm with its wide range of movement and the flexible positioning options for different examinations are particularly valued.

ORmed™ facilitates everyday clinical workflows

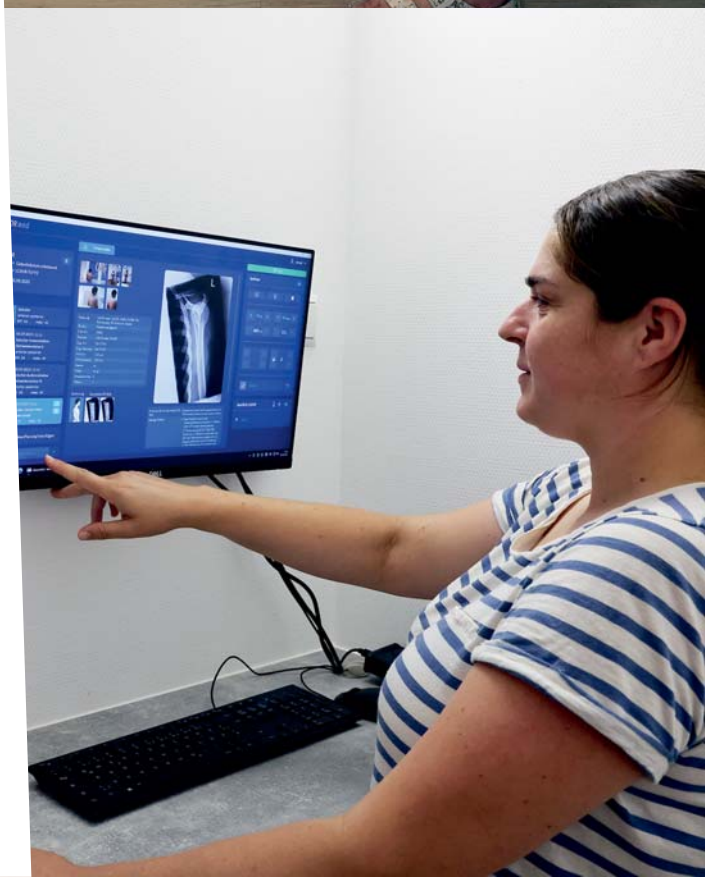

The ORmed™ X-ray software has also received positive feedback in daily use. The team particularly values its fast response times, ease of use, convenient generator settings and multimedia X-ray positioning guide.

Professional installation and reliable support

The installation process went smoothly. The practice team particularly praises the friendliness and professional expertise of the OR Technology staff, as well as the reliable remote maintenance and support services.

Conclusion

"We would choose the Amadeo S motorised again at any time," says Dr Schmidt. "The system operates reliably, delivers excellent image quality and makes our daily work easier thanks to its fast workflow and simple operation."

Wherever They Are

Amadeo S *motorised*

Motorised digital swivel-arm system

Ideal for small rooms with low ceiling heights as low as 2.40 m

Wide range of X-ray examinations in standing, seated and supine positions (table optional)

Maximum safety thanks to emergency stop buttons and collision sensors that account for ceiling height and detector position

Fast and easy automated positioning of the stand, combined with motorised adjustment of the examination-specific source-to-image distance

Intuitive operation via a 10-inch touchscreen display
